EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Joe McKinney Muncy on July 20, 2006.

The application has been amended as follows:

The words "powder mineral" are deleted from lines 1-5 and 7 of claim 1.

3. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is by Schlaepfer (US 4415623). Schlaepfer teaches a method of decorating fabric through transfer printing, where a carrier support is coated with a thermoplastic material on the top surface and the carrier support is placed on top of a fabric with a neither flat nor straight surface. The composite laminate is heated at 160 °C, resulting in thermal degradation of the support and fusion of the coating within the fabric material. The thermoplastic coating's fusing temperature is preferably at least 100°C and at least 20 °C below the softening point of any thermoplastic material, which may be higher than 180 °C. The minimum decomposition temperature of the heat degradable substrate is 100 °C (Figures 3 through 5; column 1, line 61 – column 2, line 9; column 3, lines 5-32). However, there is no teaching of partially withdrawing the carrier support prior to subjecting the fabric to a rise in temperature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
